Boxing clever

Exclusive to Midas 100, this clever packaging system is ideal for installations with 1st fix and 2nd fix stages.

Once the easy fit fixing bracket is installed, the installer can return to the job at a later stage, secure in the knowledge that the shower valve and kit are still safely sealed in the box. (See page 8 for details).

Easy fit bracket

Designed with the installer in mind

Midas easy fit fixing bracket has been thoughtfully designed and packed full of innovations. To make installation simple and performance great, it is both strong and light, so no matter what the job presents, the fixing bracket can provide the answer.

Multiple slotted fixing points
Vertical and horizontal fixing holes allow for more installation options. The holes are elongated to allow for adjustment and levelling

30mm depth
No need for deep recess in brick wall

Easy access large mesh inlet filters
Larger capacity filters require less regular maintenance

Back nuts
For panel mount wall installations

Pipe locking clips

15mm Grip-tite push fit connectors
For easier fixing to both copper and plastic pipe

150mm centres
Suitable for the entire Midas range as well as other standard bar valves with 150mm centres

Chrome covers
These covers incorporate a mastic groove and will shroud the thread, for more attractive connections

Pressure test blanking caps
These are fitted during 1st fix to enable pressure testing prior to 2nd fix

The Midas easy fit fixing bracket enables multiple fixing options...

1 – Solid wall
The bracket is slimline, so only 30mm insertion depth is required.

2 – Stud wall
In a typical 75mm stud wall, the bracket can be screwed onto a noggin.

3 – Thin stud wall
Even with 45mm metal stud walls, the bracket can be screwed vertically to a noggin.

4 – Panel mounting
For wall panels where there are no noggins, the bracket can be secured by clamping in place with the back nuts.

First fix, second fix packaging

1st fix, 2nd fix packaging

Designed with the installer in mind, this award winning packaging system for Midas 100 means the installer can access the easy fit bracket, fix it, and return later to finish the job – secure in the knowledge that the shower system is still sealed in the box.

Water saving basin monobloc tap

Finish the look of your bathroom with Aqualisa's new water saving monobloc tap. Suitable for HP/Combi** water systems, the clever handle mechanism allows the user to choose a reduced eco-flow or full flow. The tap comes complete with a pop-up waste assembly.

Exposed pipe fittings

All Midas showers offer the option of exposed pipe fittings that enable the products to be fitted to rising or falling exposed pipework.

* When fitted unrestricted to an unvented high pressure system

** When hot water is required when fitted to combi boiler systems, full flow position may need to be selected
