PRESS RELEASE

Forget the big toe test, Quartz Digital makes bathtime a breeze!

Perfectly accurate, thermostatic temperatures, the option of wireless remote control, and the simplest start/stop switch...

The benefits of sophisticated digital showering have been well documented for sometime – and those in the know generally regard digital technology as the future of the bathroom. But, whilst showers have become increasingly innovative, baths – by comparison – have taken a backseat.

Until now, that is. Because Aqualisa has launched **Quartz Digital Bath**. Completing the family of Quartz Digital products, Quartz Digital Bath does just what Aqualisa's award-winning digital technology has always done: deliver an intelligent and reliable performance, with the bonus of a fuss free installation.

Except this time, the technology is all about the tub, rather than the shower.

So, how does Quartz Digital Bath work? Well, just like its sibling, Quartz Digital Shower, Quartz Digital Bath is controlled by a remotely sited processor. Smaller than a shoebox, the processor is typically installed in an airing cupboard, the loft or under the bath. A slim data cable connects the processor to the bath control. Hot and cold water flows into the processor, blending it with thermostatic precision to the user's selected temperature. Then, it's fed back through Quartz Digital Bath's contemporary bath overflow filler.

There are no taps to fiddle with, just a simple, one-touch start/stop button on the Quartz Digital Bath control. And best of all, there's no big toe test, either. Because like Quartz Digital Shower, Quartz Digital Bath's control also features an LED display. This flashes whilst your bath water is still warming up and then turns to steady when it's reached your selected temperature. There's also peace of mind; Quartz Digital Bath has a factory pre-set maximum temperature of 45°C – reassuring for when the more vulnerable are in the bathroom.

So what could be easier? Well – not much, really. However, if you're always running around and juggling the kids with baths and bedtimes, Quartz Digital Bath's clever wireless remote or dual switch could be just the thing. The wireless remote can be used up to 10 metres away from the bathroom and can be positioned wherever is convenient for you – just inside the bathroom door, on the landing – or for en suite bathrooms, on a bedside table. Alternatively, there is the cabled dual switch, which also allows Quartz Digital Bath to be turned on and off from a remote location.

Quartz Digital Bath is also versatile. If preferred, the control can be situated away from the tub – great if you need the control to be at a more convenient and accessible height. Plus, if space is at a premium and Quartz Digital Shower is installed over a bath, there are a couple of options: install a Quartz Digital Shower and Quartz Digital Bath for independent use and temperature setting, or choose a Quartz Digital concealed shower and combine it with the Quartz Digital Bath accessory

PRESS RELEASE

Forget the big toe test, Quartz Digital makes bathtime a breeze!

kit there's a simple solution that will effectively allow you to convert a Quartz Digital concealed shower installation to a bath shower mixer: an accessory kit comprising of a diverter valve and bath overflow filler, allowing easy, instant switching between bath and shower.

Guaranteed for 5 years, Quartz Digital Bath is compatible with all types of domestic plumbing systems – gravity, combi and mains – and two processors are available. Standard – for use with combi and mains systems and pumped – for use with gravity systems. The latter also features an integral pump – another advantage, as there's no need to worry about choosing and installing a separate pump.
