Tricks of the Trade

Choosing a new shower or upgrading your existing one is a serious part of any bathroom overhaul – but with so many types and designs out there, it can seem an impossible task.

So, check these shower tips from Aqualisa off your list – and you'll be well on your way to getting the best from your new shower...

- Think about what sort of water heating system you have. It could be Mains fed, combination boiler or gravity-fed. Whatever system you have may affect your choice of shower – so it's wise to get your system checked out by a qualified plumber or heating engineer.
- If you have a gravity fed system, find out how much water pressure is available. Your plumber should be able to help you – and it's vital to know – as if it's not enough, you might find you'll have to budget for a pump to give your shower an extra boost.
- Consider the showering experience you'd like. For the ultimate wake up call, go for a high-performance power shower, or for a more relaxing start to the day, a shower that features a large rose, such as Aqualisa's Axis, which offers a soft, 'waterfall' feeling.
- How many of the family will be using the shower? Two adults plus the kids all taking long, hot showers in the morning rush hour may influence your choice. Plus, you'll need to find out if your water heating system will have enough capacity to cope with your family's showering demands.
- Think about showering accessories. Body jets are popular and practical, with some manufacturers incorporating them into the overall design of their showers.
- Don't forget to ask about shower heads. Go for an adjustable height head if you're looking for a versatile family shower and if possible, opt for a self-cleaning shower head such as Aqualisa's Varispray and Turbostream designs, which incorporate anti-scale nozzles that ensure your shower remains free-flowing – even in hard water areas. Many shower heads also offer more than one spray pattern, so check these out, too.
- Finally, do take into consideration the time and work that fitting your new shower will need. Major building works in your bathroom don't have to be part of having a new shower – and some – such as Aqualisa's Quartz, can even be installed in as little as two hours, without damaging any existing décor.

Quartz Digital – An Intelligent Showering Solution...

Quartz Digital is an 'intelligent' shower that can be pre-programmed to the temperature of your choice, and which, via its smart, flashing LED (light emitting diode) switch, lets you know exactly when it's time

Tricks of the Trade

to jump in. And that's not all; if a long desk-bound day is beckoning, press the boost button, and you have an extra wake-up call – not to mention a few more, invigorating gallons of water.

Plus, for the really lazy, there's even the option to switch the Quartz on remotely. The remote button – which also features a flashing light – can be situated up to 10 metres away from the shower, and allows you to see instantly when your shower is warm enough.

The Quartz is also the perfect choice for a busy family and its integrated thermistor means that it's safe for the kids to use – whether they're seven or seventeen. Sleek and minimalist, the Quartz is a doddle to install. Its unique design and configuration means that no bathroom walls need be damaged, and it can be retrofitted in as little as two hours.

At A Glance/Technical information

- The Quartz is available as both an 'off-the-wall' or 'on-the-wall' design
- Standard or pumped systems are available
